

Tutorials on creating Maps

1. Method 1 : From Desktop application

Using Geonode (<https://geonode.communitygis.in>)

[Tutorial Link](#)

2. Method 2: From Mobile application

Using Qfield for Qgis

To use mobile application the project to be loaded on Qfield app needs to be preloaded.

Some of the layers needed can be downloaded from

<https://geonode.communitygis.in>, while others may be added by creating empty shape files / gpkg files in form of point / line / polygon geometry.
